## Chameleon and WELL certification

WELL is a certification focused on the health and welfare of people in the building. In this certification, scientific studies into the effects of building design on health are translated into concrete assessment norms.

Chameleon can make an important contribution to a healthy working environment and to WELL points in general.

### Movement V07 Active Furnishing (2 points)

**Background:** Research to which WELL refers has shown that seated work can be linked to negative health effects such as obesity, diabetes type 2, heart disease and even early death.

**Solutions:** An active working environment ensures that employees spend less time sitting down. An example are sit-stand desks, but in principle any method that gets people out of their seats contributes to the solution.

**Contribution Chameleon:** In most jobs, spending too much time seated at work is directly related to computer work. Everything is digital. A Chameleon whiteboard wall gets employees away from their desks to collaborate more actively. This not only benefits project results but also the health of the employees. Project methods like Scrum ensure that teams come together at least once a day for a sprint. However, whiteboard walls are also used for regular brainstorm sessions, consultations and presentations. As such, Chameleon stimulates an active approach throughout the day, both mentally and physically!

### V07 X10

### Materials X10 Volatile Compound Reduction

**Background:** This section stipulates a maximum level of dangerous volatile organic substances in building materials and products.

**Criterion:** At least 20% of newly installed products contain a formaldehyde content of less than 100 ppm or to the extent permitted by the local code.

**Contribution Chameleon:** The whiteboard surface and the MDF core and the lacquer used for the edges fulfil that standard.

The MDF in our products complies with the E1 classification and the more stringent criteria of CARB phase 2 (<0.11 ppm).

Chameleon enamel whiteboard surface has the Indoor Advantage™ Gold certificate: The enamel whiteboard surface meets the requirements of the Indoor Air Quality certificate (SCS-EC10.3-2014 v3.0) for 'open plan and private office workstation' parameters and 'School classroom' parameters. Registration no.: SCS-IAQ-02139.

The edging lacquer only contains 5 g/l volatile organic substances (EU limit value max 140 g/l).
